

Finished Wall Restoration

EVERLAST™ BASEMENT WALL SYSTEM

Your basement leaking is bad enough - but when your basement is finished, it's much worse! The bottom of your finished walls are damaged, mold may appear, and rot and odors begin. **Not a good situation.**

When you don't want to rip out your entire finished basement, and have to restore the bottom of your finished walls anyway, the EverLast Finished Wall Restoration System is a perfect solution!*

**Painting of the existing walls (or door trims) above the chair rail height is not included in this solution.*

Restore the bottom of your finished walls, without ripping the entire basement out and starting over!

- Panels are cement board, covered with a textured mold proof, washable, vinyl finish
- EverLast panels combine the two most popular interior finish colors – off white and beige – laid in a designer pattern over a slightly alligatored vinyl
- Trim is all plastic and installed over metal studs – no paint needed, and cannot be ruined by a plumbing leak or high humidity
- Washable wall surface expertly hides wall marks and shine and is washable and never needs paint
- 50 Year Warranty on the EverLast Walls
- If you need a perimeter drainage system, it's the perfect time to install the WaterGuard system, which needs to be installed behind your finished walls to protect them

STEP 1

BEFORE: Bottom of existing walls damaged, from water and high humidity.

STEP 2

Cut and remove the moldy, damaged drywall and bottom of the studs.

STEP 3

With the bottom of the finished wall removed, a perimeter drainage system can be installed – as needed.

STEP 4

Replace the bottom of the wood studs with metal studs.

STEP 5

Install mold-proof EverLast Wall Panels up to 32", finish with pvc chair rail and trim. Install optional ThermalDry or MillCreek Flooring.
