

CleanSpace®

CRAWL SPACE ENCAPSULATION SYSTEM

The negative effects of a dirt crawl space are –

- High humidity and condensation
- Mold and wood rot
- Insects and critters
- Cold floors and higher heating costs
- Odors and drafts upstairs
- Unhealthy and uncomfortable living spaces

The solution is to uncouple the effects of the earth to your house with CleanSpace – isolating your house from the ground.

CleanSpace is a heavy 20 mil-thick-liner – like a pool liner. It is manufactured in 7 layers – a blend of high density polyethylene for puncture resistance, low density polyethylene for flexibility, and polyester cord reinforcement for brute tear resistance. The white finish really brightens your crawl space and allows you to easily see that your crawl space is free of mold, insects and dirt. The CleanSpace™ is manufactured with an antimicrobial additive called “UltraFresh” – molded right into the material.

Your entire crawl space is lined with CleanSpace™ to permanently separate your home from the ground.

- Wood, organic materials removed
- Rocks removed, uneven surfaces leveled (depending on condition)
- CleanSpace™ liner carefully fitted and installed
- Permanently held in place with drilled-in fasteners and spikes
- Edges, seams and pipe penetrations sealed

SEE OUR GROUNDBREAKING BOOK

CleanSpace™ is part of a healthy crawl space and healthy home strategy and should be combined with our other products to control water, humidity, outside air infiltration and heat loss. Your CleanSpace™ dealer will recommend the best combination for your home.

RESULTS (when combined with other products needed)

- Attractive, bright, tough crawl space liner that is vapor-proof and warrantied by your dealer against rips and tears
- Low humidity – no new mold growth, less pests
- Warmer floors, lower heating costs
- A healthier home that is less expensive to own
