

SmartSump™

CRAWL SPACE DRAINAGE SYSTEM

Part of keeping your crawl space dry involves a sump pump. The state-of-the-art SmartSump™ is designed just for crawl spaces. The liner and lid are designed to form a tight seal around the CleanSpace liner.

How *Smart* is SmartSump™?

Since you don't go into your crawl space a lot, you need to know if there is a plumbing leak. The SmartSump™ has a unique lid design so water from a plumbing leak fills an alarm pocket on the lid first, sounding a WaterWatch alarm. From there, the water flows down a special airtight floor drain that lets water down, but damp air cannot come up into your crawl space. The alarm also alerts you to pump or power failures.

The WaterWatch Alarm

Clean pump stand keeps pump out of sediment

Two-piece lid allows easy access

Airtight floor drain in case of plumbing leaks

OPTIONAL BATTERY BACKUP PROTECTION

The optional UltraSump battery back-up pumping system has a second pump in case of primary pump failure, a second switch in case of switch failure, and a second power source in case of power failure.

The UltraSump can pump out over 12,000 gallons of water out with the energy in the special 120 amp sealed PowerPack. A charger keeps it charged when the power is on, and an alarm will tell you when the UltraSump is operating. The UltraSump is optional but highly recommended.
